

RECREATIONAL SAFETY

CAN WE MAKE PUBLIC AREAS SAFER ?

Recreational areas such as parks, playgrounds & skateboard ramps are quite often potentially dangerous areas due to them being mostly outside and subject to wet weather conditions.

They can become very slippery when either wet or contaminated by moss etc. In a split second a child, or even an adult, can slip & suffer major damage to head, back or limbs.

Swimming Pools & other tiled areas can be very slippery when wet. Treatment with AS-B Anti-Slip will greatly increase the slip resistance when the tiles are wet.

The wooden ramp on the left was very dangerous when wet, the application of Little Grippas solved the problem.

The stairway on the right caused great concern over safety issues. Not only was it slippery when wet, but there was also a lack of step edge definition when the light was not too good. Our stair nosings overcame both problems

For a **FREE, NO OBLIGATION** slip meter test, advice or quotation please contact your local licensed applicator on the number below. We have solutions for Tiles, Wooden Decks, Ramps & Steps, Concrete, Vinyl, Pool Surrounds, Baths & Showers.
